Subject: current geoscience draft
Attachments: Draft - (Geoscience edits) Induced seismicity September 24 2013_geo sent to Phil for reviewNSD.docx

This includes changes I accepted from Phil (which are now just part of the text) and areas where I either did not agree or attempted to clarify a poorly written section (in track changes).

The key discrepancy at the moment is the last two sections, which Phil has marked for the 'axe'. We haven't had a chance to discuss these areas yet. Any feedback, please?
